Education system

Education is compulsory and free of charge for a period of 12 years starting at the age of 6 and ending at the age of 18

Education system

- Freedom of education proclaimed in the Belgian Constitution
 - Freedom given to pupils and parents to chose the school that suits them
 - Freedom of school management
- Networks
 - Public schools run and financed by the public authorities
 - Public grant-aided schools run by provinces or municipalities
 - Private grant-aided schools run by private associations
- Public financing based on the same rules whatever the network:
per capita funding

Education system

- Decree of July 24, 1997
- Give to all pupils the means that are necessary to ensure equal chances of social emancipation, in particular by allowing them to actively participate in society.
- “Give more to those who have less”
- By identifying schools attended by underprivileged pupils.

1989-1998 Education priority areas

1989-1998 Education priority areas

- Area-based targeting
- Identification problems

1998-2009 Positive discrimination

- Distinction made for the benefit of schools on the basis of social, economic, cultural and educational criteria.
- Indirect measure of the characteristics of the schools' population
- Via the socioeconomic characteristics of the pupils' neighbourhood.

1998-2009 Positive discrimination

- What ?
 - Extra teachers and funding
- To whom?
 - Schools
 - Approximately 12% of the total of pupils
- How are the schools chosen?
 - Pupils' socioeconomic status
 - The schools are ranked from the most disadvantaged to the least
 - The first schools of this ranking are selected amounting to a total 12% of the whole population

Socioeconomic index (SEI)

A composite index defined on the basis of 11 socioeconomic variables aggregated at the level of neighbourhoods and given to each pupil according to his/her neighbourhood of residence. These 11 variables were in these 5 categories:

- Revenues
- Levels of diplomas
- Professional activities
- Employment market and unemployment benefit
- Housing comfort

Socioeconomic index (SEI)

Socioeconomic index (SEI)

Socioeconomic index (SEI)

Socioeconomic index (SEI)

Socioeconomic index (SEI)

2010 – on differentiated funding

2010 – on differentiated funding

- Same principle as positive discrimination
- More means
- More progressiveness
- « Robin hood » idea: taking from the most advantaged schools.
 - Limited budget
 - Impossible

Some characteristics of the targeting method

- Solution to avoid any permanent labelling of schools
- Easy but is it accurate?
- No « ethnic » nor linguistic targeting
 - Political arguments: no labelling
 - Scientific arguments: do not add any information to the identification of the target group

A criticism of the targeting method

A criticism of the targeting method

- Selective recruitment: schools recruiting in the same neighbourhood may select different types of pupils
- We have shown that this selective recruitment exists according to
 - Grade repetition
 - Educational delay
 - An individual socioeconomic index

The new targeting method (2017)

- SEI at an individual (household) level
 - Household revenue
 - Part of adults who have a professional activity
 - Part of blue collar workers
 - Part of white collar workers who work in the lower segment of this activity sector
 - Having benefitted from social assistance (or not)
 - Part of high diplomas (levels 5 and 6)
 - Part of low diplomas (levels 1 and 2)
- Directly aggregated at the school level for data protection

The new targeting method (2017)

- A more accurate measure of socioeconomic disadvantage
 - Better correlation with grade repetition at the school level
 - Better correlation with external evaluation results at the school level
- But a better evaluation of this accuracy requires data at an individual level that are not yet available for juridical reasons
 - Actual individual SEI
 - External evaluation results at the individual level
 - A procedure for linking both information

The new targeting method (2017)

- A complex procedure
 - Data at the household level are available from the Crossroads Bank for Social Security (CBSS)
 - But these data are protected
 - Using a common ID code these data have to be directly aggregated at the school level in the CBSS databases
 - No one has access to SEI of any individual pupil: the information is directly aggregated at the school level.
- Missing data
 - New migrants are given a very low SEI (average of the 2000 lowest calculated SEI)

The new targeting method

- Some problems
 - Some areas at the border with France or Luxemburg where some schools have a substantive number of French or Luxemburgish pupils or pupils whose parents work in France or Luxemburg (we have no data for them)
 - Other school-related policies used the area-based socioeconomic index and are thus impacted by this change: school enrolment procedure.

School enrolment procedure

- This procedure used the old area-based SEI to give priority to some pupils to enrol in schools where there are more demand than supply
- Pupils from low-SEI neighbourhood had thus priority to enrol to highly demanded schools.
- We still need to calculate an area-based index based on the same procedure but with an aggregation at the neighbourhood level.

Area-based SEI

Our previous neighbourhood variables depended on the characteristics of the whole population of each neighbourhood

Area-based SEI

Our new neighbourhood variables depend on the characteristics of the pupils living in this neighbourhood.

Area-based SEI

Each individual receives the value calculated for his/her neighbourhood

Thank you for your attention

Annex – how the transition between the two SEI will be managed

September 2017

$$\text{Means}(M) \text{ 2017} = [(M \text{ 2017} * 1) + (M \text{ 2010} * 5)] / 6$$

Annex – how the transition between the two SEI will be managed

September 2018

$$\text{Means}(M) \text{ 2018} = [(M \text{ 2017} * 1) + (M \text{ 2018} * 1) + (M \text{ 2010} * 4)] / 6$$

Annex – how the transition between the two SEI will be managed

September 2019

$$\text{Means 2019} = [(M \text{ 2017} * 1) + (M \text{ 2018} * 1) + (M \text{ 2019} * 1) + (M \text{ 2010} * 3)] / 6$$

Annex – how the transition between the two SEI will be managed

September 2020

Means 2020= $[(M\ 2017 *1) (M\ 2018 *1) + (M\ 2019*1)+ (M\ 2020*1)+ (M\ 2010 *2)]/6$

Annex – how the transition between the two SEI will be managed

September 2021

$$\text{Moyens 2021} = [(M \text{ 2017} * 1) + (M \text{ 2018} * 1) + (M \text{ 2019} * 1) + (M \text{ 2020} * 1) + (M \text{ 2021} * 1) + (M \text{ 2010} * 1)] / 6$$

Annex – how the transition between the two SEI will be managed

September 2022

$$\text{Moyens 2022} = [(M \text{ 2016} \times 1) + (M \text{ 2017} \times 1) + (M \text{ 2018} \times 1) + (M \text{ 2019} \times 1) + (M \text{ 2020} \times 1) + (M \text{ 2021})] / 6$$
